How to embed power bi reports in angular application

Embedding Power BI reports in an Angular application can be done using the Power BI JavaScript API. Here are the steps you can follow:

1. Get the Power BI embed token and report ID:
   - You need to get the embed token and report ID from Power BI service. You can get these values using Power BI REST API or Power BI PowerShell cmdlets.
2. Install the Power BI JavaScript client package:
   - Install the Power BI JavaScript client package using npm. You can do this by running the following command in the terminal:

   Copy code

   ```
   npm install powerbi-client
   ```

3. Import the Power BI JavaScript client:
   - Import the Power BI JavaScript client in your component by adding the following import statement at the top of the file:

   python   Copy code

   ```python
   import * as pbi from 'powerbi-client';
   ```

4. Create a Power BI embed configuration:
   - Create a Power BI embed configuration object with the embed token and report ID you obtained in step 1. You can also set additional options such as filters, page name, etc. For example:

   yaml   Copy code
